„T-O-P“
CONSULTING

Technology
Organization
Personnel

CBM is an engineering company with a broadly diversified knowledge in mining engineering, economy, safety and the related domains. Our consultants themselves dispose of widespread long lasting experience from management positions in the mining industry.

Our consulting services provide tailormade solutions taking into account the customers - your - specific technical and organisational needs on location in order to exploit mineral deposits in the optimal way. With best safety for your staff and assets and obeying all relevant regulations.

Business consultancy

If you are managing a mine or if you are owner of a mining business we offer to assist you with:

- Technical and organisational advice in order to advance your technical standards in the mining process in order to promote productivity and enhance your position on the market.
- Technical planning of the mine and the mine openings choosing the best suitable mining method against the background of the geologic conditions (rock mechanics, tectonics and support).
- Technical planning of the best suited mine equipment its selection and most cost-

effective purchase, delivery and installation.

- Check-up of your safety systems and procedures in order to mitigate hazards, enhance operational reliability and safety as well as advance productivity at the same time (i.e. by means of mine ventilation, fire damp protection, occupational safety etc.).
- Training of your employees, foremen and managers concerning all mining, operational and safety matters.
- Organisational consultancy leading to optimized structures in the co-operation of your mines with their customers and suppliers as well as the establishment of a trouble-free communication with the local authorities.

Administration consultancy

If you are working within the government and its administration on ministry, supra-regional or local level we are at your service with:

Consultancy concerning **mining authority** in order to:

- Create structures towards a comprehensive professional education and training of mining personnel, foremen and managers.
- Establishment of the statutory provisions needed in order to create a legally certain and organisational reasonable body for the

public supervision of mines. Goal is to provide likewise technically and occupationally safe performance of the national mines.

- Organisation of a national public body for mine safety services and an effective mine rescue.
- Training of the mine inspectors and the rescue personnel.
- Conceptual design of campaigns for the motivation enhancement of the mine personnel concerning safety related issues and a decrease of accidents.

Efforts and consultancy in **Environment Protection** :

- Assessment of environmental impacts of mine projects.
- Monitoring of emissions and planning of mitigation strategies.
- Concepts for measures towards recultivation of abandoned mine sites.
